ECON 520 Advanced Macroeconomics Analysis

Fall 2016

Office hours: Thurs 2 - 3 pm, or by appointment

Contact Info: nfrancis@unc.edu

Instructor: Neville Francis

Location: GA 06G

General Information: This course is part of the Macroeconomics sequence at the University of North Carolina, Chapel Hill.

Objective: The course is designed to teach senior undergraduates their way around the professional, highly technical literature, to provide a sketch of approaches and positions on issues of macroeconomic policy and theory, and to provide as thorough a grounding as can be provided in a single semester to the models and tools macroeconomists use.

Macroeconomic analysis is primarily concerned with two issues: (i) developing positive models in order to understand the dynamics of key macroeconomic variables such as output, employment, unemployment, inflation, interest rates, etc.; and (ii) deriving normative prescriptions for macroeconomic policymaking, in particular regarding the proper setting of fiscal and monetary policies.

Readings *should* be completed before class: lecture will make more sense, and the process of trying to learn how to constructively read modern economics journal articles is an important professional skill.

Problem sets *must* be attempted--in groups if you wish, alone if you wish. One of the major points of the course is to give the students familiarity with the analytical tools that modern macroeconomists use. The *only* way to become proficient in their use is to use them: hence the problem sets.

Text: David Romer, *Advanced Macroeconomics*, McGraw-Hill/Irwin, 2006 .
Listed journal articles.

Attendance: Attendance is of vital importance to your performance in this class. The information provided each lecture has a direct bearing on exams. Extensive absenteeism can be detrimental to your grade.

Evaluations: The assessment for this class consists of two midterm exams, a final exam, and a term paper. Midterms and final exam are closed notes and closed books. The midterms will be worth 20 % each and the final will be worth 40%. The term paper will account for the remaining 20% of your grade. The exam schedule will be announced in class.

There will be **no make-up exams**. If an exam is missed **for a valid reason**, the final exam will be weighted accordingly. You are required to take the final.

General Disclaimer: There are no absolute guarantees in life. Although every effort will be made to adhere to the preceding statements and the schedule that follows, this syllabus is subject to change as circumstances warrant.

Starred () readings are required.*

I. Economic Growth

A. The Solow Model

*Romer, David. *Advanced Macroeconomics* (second edition), Chapter 1.

*Solow, Robert. 1956. "[A Contribution to the Theory of Economic Growth](#)" *Quarterly Journal of Economics* 70:65-94.

B. Cross-Country Income Differences

*Romer, David. *Advanced Macroeconomics*, Chapter 3, Part B.

*Hall, Robert E. and Charles I. Jones. 1999. "[Why Do Some Countries Produce So Much More Output per Worker than Others?](#)" *Quarterly Journal of Economics* 114:83-116.

*Mankiw, N. Gregory, David Romer, and David N. Weil. 1992. "[A Contribution to the Empirics of Economic Growth](#)" *Quarterly Journal of Economics* 107:407-437.

*Jones, Charles I. 1997. "[On the Evolution of the World Income Distribution](#)" *Journal of Economic Perspectives* 11:19-36.

C. Endogenizing Growth

*Romer, David. *Advanced Macroeconomics*, Chapter 3, Part A.

Rebelo, Sergio. 1991. "[Long-Run Policy Analysis and Long-Run Growth](#)" *Journal of Political Economy* 99:500-521.

*Lucas, Robert E. 1988. "On the Mechanics of Economic Development" *Journal of Monetary Economics* 22:3-42.
